PROFESSIONAL SUMMARY

Full-Stack Software Engineer (TypeScript, Next.js, Node.js) focused on building scalable systems using Clean Architecture. I integrate AI-driven workflows to accelerate development cycles and rapidly deliver business-critical solutions.

WORK EXPERIENCE

Hedgehog

Full-Stack Software Engineer (Contract)

Aug 2025 – Jun 2026

Australia Remote

- Designed and implemented multiple end-to-end features on frontend and backend, applying SOLID principles and Clean Architecture to ensure system scalability and modularity.
- Comprehensively updated backend dependencies from Node.js 18 to 20, reducing security vulnerabilities from 14 high and 60 moderate to 0 high and only 3 moderate.
- Configured automated backups for S3 buckets on AWS, ensuring high availability and secure data retention.
- Identified and resolved critical bugs causing system inconsistencies, ensuring the integrity and reliability of transactional information.
- Owned ticket workflow and client communication at Hedgehog, keeping requirements and release docs current so each sprint stayed aligned with business priorities.

Bigger

Full-Stack Software Engineer

Feb 2023 – May 2025

Australia Remote

- Engineered a custom back office system from scratch to automate manual CRUD workflows, empowering founders with a streamlined interface for direct user and data management.
- Migrated 11 modules from an outdated Python backend to NestJS, working in tandem with another developer, modernizing the tech stack and improving code maintainability and scalability.
- Built Bigger's Expo scaffold template with architecture, testing, and EAS build pipelines, giving future mobile projects a production-ready starting point and cutting setup time.
- Built the data layer between Bigger's NestJS backend and its React Native / web clients, handling async API flows that kept mobile and web interfaces in sync.
- Managed and deployed client applications on Oracle Cloud using Coolify, optimizing infrastructure administration and automating deployment flows.
- Executed stress tests on production instances using Grafana and Prometheus to monitor performance metrics and guarantee system stability under high demand.

TECHNICAL SKILLS

- **Languages and Front-end:** Node.js, CSS, HTML, JavaScript, Next JS, React, React Native, React Query, Svelte, Tailwind, TypeScript
- **Back-end and Mobile:** EAS, Expo, Maestro, NestJS, Postgres, Supabase, TypeOrm
- **Testing and DevOps:** cAdvisor, Coolify, Cypress, Docker, Git, Grafana, Jest, K6, Playwright, Prometheus, Supertest, CI/CD
- **Cloud and Architecture:** AWS (App Runner, S3, RDS, Cognito), Oracle Cloud Infrastructure, Microservices, System Design, Clean Architecture, Hexagonal Architecture,, Screaming Architecture, SOLID

KEY PROJECTS

Pattern Master

- Built an interactive coding platform (Monaco editor) where developers refactor anti-patterns, featuring an LLM evaluator that scores code (0–100) and provides structured feedback on Clean Architecture.

Action Sync

- Developed an AI-integrated application to process meeting transcripts, automatically extracting and syncing actionable tasks directly to Trello.

EDUCATION

Personal and Professional IT Technician
EETP N° 644 "Gregoria Matorras"

January 2015 – January 2021
